

FELIX *Front End of
Library Information Expansion*
Journal Contents Database

The FELIX Journal Contents Database is made up of :

- The "Zasshi-Kiji-Sakuin" (Journal Articles Index, a database dedicated to the contents of academic journals published in Japan)
- Swetscan (a database dedicated to the contents of academic journals published in Western languages)
- PCI (Periodical Contents Index, a database dedicated to the contents of human sciences-related academic journals in Western languages)

Combined searches across these databases are possible.

In addition to using them independently, the three databases offer a combined content of more than 27 million Japanese and non-Japanese articles that can be searched at once by title, author's name and title of publication.

	Zasshi-Kiji-Sakuin	Swetscan	PCI
Years recorded	1948 -	1993 -	1770 -1999
Number of publications	c.10,000	c.14,000	c.3,500
Number of articles	5.7 million	19 million	14.1 million
Update frequency	every other week	weekly	-

(as of April 2004)

Choosing a database and entering search keywords

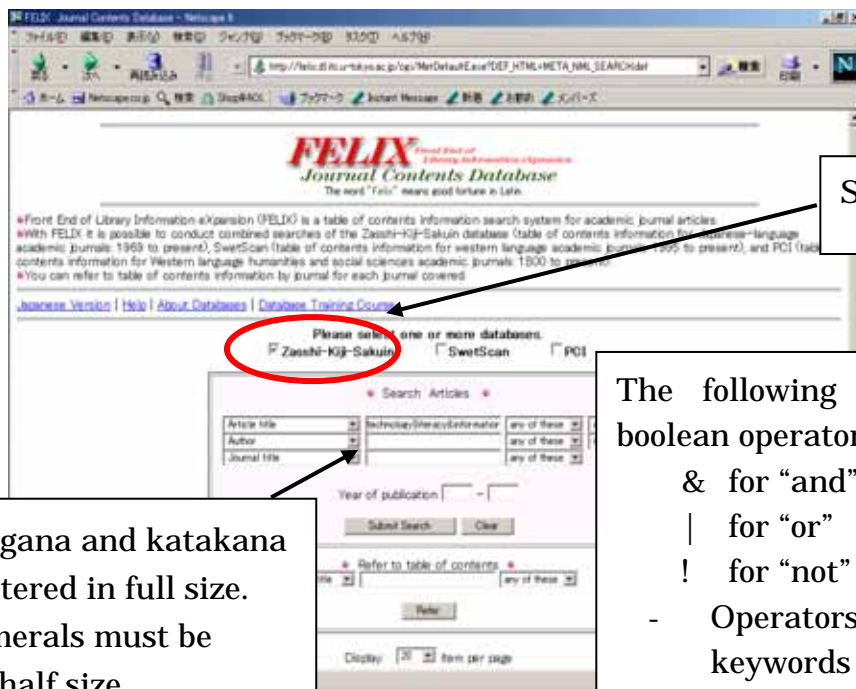

When choosing a database the Zasshi-Kiji-Sakuin box is checked by default, but several databases can be selected together.

After choosing the search topic, keywords must be entered. Those can be either the article title, author name, name of the publication or ISSN number.

In principle the data is stored as it appears in each publication, but please note that the Kanji are all converted to their present common use form.

When entering several keywords, boolean operators (and, or, not) may be used.

Example : Searching the Zasshi-Kiji-Sakuin for articles about “Information technology and Information Literacy”.

Select a database.

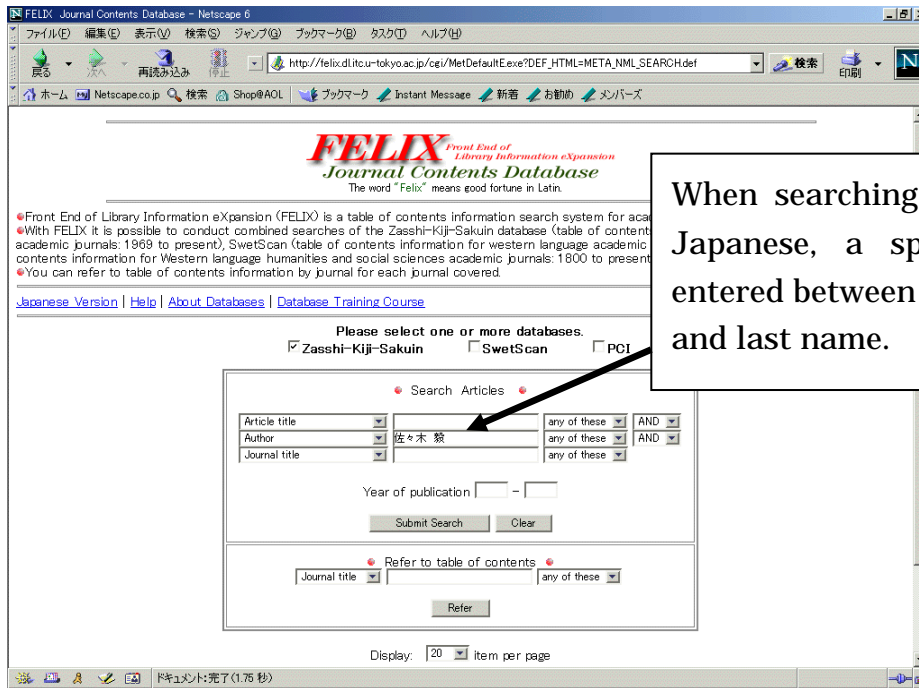

- Kanji, hiragana and katakana must be entered in full size.
 - Arabic numerals must be entered in half size.
- (roman letters can be entered in either upper or lower case)

- The following signs are used as boolean operators :
- & for “and”
 - | for “or”
 - ! for “not”
- Operators are inserted between keywords without leaving a blank space.
 - The operators’ order of priority goes from left to right.

About the keywords :

Search results will differ depending on the way keywords are entered, for example "information technology" and "information&technology". A search with "information&technology" would also include articles such as "Skills - IT directors need to focus on delivering **information** rather than **technology** if they are to be taken seriously by the board."

Searching by author's name

When conducting a comprehensive search by author name, a certain degree of uncertainty remains (even in the case of a single author) so proper attention should be paid. For example, when searching for all articles by 「鈴木昌弘」 (Suzuki Masahiro), assumed transcriptions must also be taken into account and entered as keywords using “or” as follows :

鈴木 昌弘 | masahiro suzuki | suzuki, m | suzuki masahiro

When searching for an author named 「佐々木 毅」 (Sasaki Takeshi), the database actually looks for all entries that include those characters.

231	佐々木 毅[他]	全身性エリテマトーデスの早期所見——抗DNA及び抗dsRNA抗体の早期診断	最新医学. 31(1) 153-162 1976 (ISSN:03708241)
232	佐々木 毅人;	宮 崇博, 高野 光司[他]	フェーパバイブラインをを用いた時分割擬似マルチポート
		電子情報通信学会論文誌 D-1 情報・システム 1-コンピュータ. 80(3) 223-226 1997 (ISSN:09151915)	
233	榊原 正明, 佐々木 毅	簡易測定による水質調査	鳥取大学教養部紀要. 26 91-130 1992 (ISSN:02874121)
234	山崎 慎一郎, 佐々木 毅	伝導紙相似法の拡大—縮少部における熱抵抗決定への応用(東京工業高等専門学校創立10周年記念号)	東京工業高等専門学校研究報告書. 7 15-18 1975 (ISSN:02860503)

A different author may also be displayed.

Search results and details screen

The search results may be narrowed by conducting a second search within them.

Search results that have been checked may be saved as a separate text file.

If the search results do not exceed 300 hits, they may be sorted for example by author's name.

Click here to search for this publication within the university's libraries with OPAC.

A document may also be accessible in electronic format (E-journal). Approximately 5,100 E-journals are currently available for use at the University of Tokyo.

Checking the contents

A designated publication's contents can be browsed starting from the latest issue.

FELIX Front End of Library Information eXpansion
Journal Contents Database
The word "Felix" means good fortune in Latin.

- Front End of Library Information eXpansion (FELIX) is a table of contents information search system for academic journal articles.
- With FELIX it is possible to conduct combined searches of the Zasshi-Kiji-Sakuin database (table of contents information for Japanese-language academic journals: 1969 to present), SwetScan (table of contents information for western language academic journals: 1995 to present), and PCI (table of contents information for Western language humanities and social sciences academic journals: 1800 to present).
- You can refer to table of contents information by journal for each journal covered.
